Not all product configurations are available in all countries.

Window blinds with a damaged or loose tension device or retractable cord that fails to fully retract pose a strangulation risk to children. To avoid this potential strangulation risk, consider purchasing cordless products or products with inaccessible cords.

## Light Control and Privacy

**Sheer:** Allows the most sunlight and the least privacy.

**Semi-Sheer\*:** Allows moderate sunlight and a little privacy.

**Light Filtering (LF)\*:** Blocks some sunlight and offers some privacy.

**Blackout (BO):** Blocks all sunlight and offers complete privacy.

\*These fabrics allow some light to come through, so their colors may be influenced by changing light conditions. Colors may appear to vary depending upon the time of day and type of lighting, as well as whether the shade is partially or fully lowered.

## Fabric Certifications

GREENGUARD Indoor Air Quality Certified® Fabrics: Many Graber® fabrics have been certified by GREENGUARD Environment Institute (GEI) to be low chemical- and particle-emitting fabrics, which provides a healthier indoor air quality. The process used for certification complied with established indoor air quality standards and is performed by a third party lab.

## Continuous-Loop Lift

- For surcharges, see price charts
- Recommended for larger, heavier shades
- A single continuous-loop cord raises and lowers the shade and keeps the cord the same length
- 1¼" single cell fabrics not available with continuous-loop lift
- Four colors of continuous-loop cord available
- A cord hold down device is included with all continuous loop lift systems; the device must be properly installed to safely control the cord loop
- For inside mount, install the shade in the back of the window frame so the cord tensioner can be mounted in front of the shade and not interfere with shade operation. Additional mounting depth may be required.
- Larger shades use a larger clutch ratio for easier lifting, but additional pulls are required to raise the shade

### Measuring Information

#### Mounting on a Wall or Molding:

Measure the width of each window from the corner on the mounting surface (molding or wall) to the point you would like to cover.

#### Mounting Above the Molding:

Measure the width of each window from the corner on the mounting surface to the point you would like to cover.

Projection measurement is the distance needed to clear any molding or obstructions that the shade will be mounted above.

**NOTE:** The projection (P) distance is needed to correctly calculate deductions for installations where the shades will use shims or projection brackets to clear molding. All projection distances must match for correct deductions to be calculated.

## Bay Windows

Shades on Bay Windows

- **No charge**
- Made as individual shades
- Each section will have its own control
- Manufacturer will take appropriate deductions for proper fit; **DO NOT** order as a corner shade if you do not want manufacturer to take deductions
- For Slide-View™ shades there is a light gap between adjacent side rails

### Measuring Information: Three-Sided Bay Window

**Measure:**

**L and R:** Width of each side window from the corners on the mounting surface to the point you would like to cover.

**C1:** Width of the center window on the mounting surface from corner to corner.

**Angle L-C1:** Angle between the (L) and (C1) windows.  
**Angle C1-R:** Angle between the (C1) and (R) windows.  
**Projection:** If needed: The depth of the trim or molding the shade will be mounted above.

### Measuring Information: Four-Sided Bay Window

**Measure:**

**L and R:** Width of each side window from the corners on the mounting surface to the point you would like to cover.

**C1, C2:** Width of each center window on the mounting surface from corner to corner.

**Angle L-C1:** Angle between the (L) and (C1) windows.  
**Angle C1-C2:** Angle between the (C1) and (C2) windows.  
**Angle C2-R:** Angle between the (C2) and (R) windows.  
**Projection:** If needed: The depth of the trim or molding the shade will be mounted above.

**NOTE:** The projection (P) distance is needed to correctly calculate deductions for installations where the shades will use shims or projection brackets to clear trim or molding. All projection distances must match for correct deductions to be calculated. For additional windows on bays with up to five sides continue with number progression for center shade sizes (C1, C2, C3, ...) and angles (angle C1-C2, angle C2-C3, ...) as needed. Measure each bay angle using a protractor or angle finder or use two business cards in each bay corner as illustrated above and fax to customer service 1-800-552-4559.

**The angle to use between adjacent center bay windows along a straight section of wall is 180 degrees.**

### Making a Template for Specialty Windows

1. Tape butcher paper, kraft, or construction paper over the window opening allowing plenty of overlap.
2. Being careful not to press against the template paper while tracing, draw an exact outline of the window opening. Pressing on the template paper may distort the paper and cause the wrong size to be made.
3. Remove the paper from the window opening. If the shade is an outside mount, add the desired amount of overlap to the window outline and draw a second outline around it to match the shape of the finished shade. Be sure to erase the inside line.
4. Mark the dimensions on the template. Check that the template dimensions match your measurements of the actual window opening.  
**NOTE:** Make sure the template is of the window opening, not the glass only measurement.
5. Cut the shape from the paper.
6. PLACE THE TEMPLATE BACK INTO THE WINDOW OPENING TO CHECK FOR PROPER FIT COMPLETELY AROUND.
7. Indicate on the template
  - “Room side” and “top” on the template
  - Purchase order number
  - Customer’s name
  - Your store name and account number
8. Roll up template and place in a mailing tube. DO NOT FOLD TEMPLATE.

**NOTE:** This is just a sample for illustration purposes only—other information may be needed for your order.

## Energy Performance

Graber® Cellular Shades are the smart choice for every window in your home. For year-round comfort, cellular shades effectively insulate your windows from the heat and cold. Regardless of climate, they are our most versatile and energy-saving window treatment available. Sanctuary fabric is constructed with three layers made up of a 100% metalized polyester film sealed between two layers of soft, high-quality, 100% spunlace fabric. This unique design forms a soft, thick barrier of insulation. Independent tests prove Sanctuary ½" double cell fabric is one of our most insulating fabrics on the market.\*

Add room-darkening side channels for added protection. By adding room-darkening side channels, reduce heat transfer by up to 33% during the winter and up to 74% during the summer.

### Block the Cold

Homes in colder climates benefit from cellular shades' insulating properties to block out the cold and regulate inside temperatures.

**Reduces heat transfer by up to 26% during the winter.\***

### Block the Sun

Homes in warmer climates benefit from cellular shades' lightblocking properties to keep the heat from transferring to the inside.

**Reduces heat transfer by up to 70% during the summer.\***

\*Values listed are for Sanctuary ½" double cell. Based on third-party testing, Architectural Testing Incorporated (ATI).

### R-Value

R-Value indicates the effectiveness of the window covering at preventing energy from flowing to the outside. The higher the R-Value, the greater the insulating effectiveness.

### Solar Heat Gain Coefficient (SHGC)

SHGC measures how well window covering blocks heat from the sun from flowing to the interior. SHGC is expressed as a number between 0 and 1. The lower the SHGC, the better a product is at blocking unwanted heat gain.
