## MOTORIZED TILT CONTROL

Minimum Width	19"
Maximum Width	84"
Maximum Height	126"
Maximum Size	7,200 sq. in.

- **For surcharge, see Motorization tab**
- 2" Grandeur™ only
- Radio Frequency (RF) only
- RF motorization allows blind operation from virtually anywhere in the house without direct line of sight
- Tilts slats on multiple blinds simultaneously or individually
- Remotes, wall switches and timers available with RF motorization
- Offers enhanced security with the optional wireless RF Timer
- Tilt slats when entering or exiting a room with optional wireless wall switches

Follow these steps to determine if your blinds can be motorized:

1. Measure blind width and height.
2. Make sure measurements are within minimum and maximum size specifications listed to the left.
3. Multiply width times height. Round each dimension up to nearest inch for easy calculation to obtain blind size in square inches.
4. Make sure your calculations do not exceed the maximum size specifications listed.
5. Multiple blinds on one headrail are allowed if total size is under 7,200 sq. in. All blinds will operate together with one motor.

**Example:**

- 84" wide x 96" high = 8,064 sq. in. (over max. size)
- 18" wide x 62" high = 1,116 sq. in. (under min. width)
- 67" wide x 84" high = 5,628 sq. in. (ok)

## MULTIPLE BLINDS ON ONE HEADRAIL

• **For surcharge, see Price Charts**

Two or three blinds can be installed on a single headrail to provide a practical treatment for larger windows or sliding patio doors.

The tilt control on cordless three on one headrail will always be on the left for the center panel. Non-standard control positions can be requested.

**Measuring:**

1. Measure overall width of the area to be covered. If space permits, an overlap of 1½" per side is recommended for outside mounts.

4. Measure height as follows:
  - a. For windows, use standard inside or outside measuring procedures.
  - b. For patio doors, measure height within ¾" of floor, either from ceiling or a point at least 6½" above the door frame. (Check slat count tables if blind is to completely clear the doorway.)

**Ordering**

1. Indicate blinds that are to be mounted on one headrail.
2. Specify total width of headrail. (For inside mount that is the total window opening.)

### Measuring Information

#### Inside Mount

- A. Width** – Measure the exact inside width of the window casing from one inside edge to the other in three different places. Record the **narrowest** measurement.
- B. Height** – Measure the exact height in three different places from the top edge of the opening to the top of the sill. Record the **longest** measurement.

## MAKING A TEMPLATE FOR SPECIALTY SHAPE WINDOWS

1. Tape butcher paper, Kraft or construction paper over the window opening allowing plenty of overlap.
2. Being careful not to press against the template paper while tracing, draw an exact outline of the window opening. Pressing on the template paper may distort the paper and cause the wrong size to be made.
3. Remove the paper from the window opening. If the blind is an outside mount, add the desired amount of overlap to the window outline and draw a second outline around it to match the shape of the finished blind. **Be sure to erase the inside line.**
4. Mark the dimensions on the template. Check that the template dimensions match your measurements of the actual window opening.  
**NOTE:** Make sure the template is of the window opening, not the glass only measurement.
5. **Cut the shape from the paper.**
6. **PLACE THE TEMPLATE BACK INTO THE WINDOW OPENING TO CHECK FOR PROPER FIT COMPLETELY AROUND.**
7. **Indicate on the template**
  - "room side" and "top" on the template
  - purchase order number
  - customer's name
  - your store name and account number
8. Roll up template and place in a mailing tube.  
**DO NOT FOLD TEMPLATE.**

**NOTE:** This is just a sample for illustration purposes only—other information may be needed for your order.
